

## RED HOT CHILI

*CAPSICUM FRUTESCENS*

*Red hot chili* is a cultivar of *Capsicum Frutescens*, a 2 m high shrub from the Solanaceae family, native to the Mexican state of Tabasco. Its flowers have quite large petals, about 2 cm, white in colour. Its small fruits - about 5 cm - are erect, oblong in shape, kind of sharp. It is a mild spicy chili: it reaches between 30,000 and 50,000 units on the Scoville scale.

### APPEARANCE

Ground paste, thick consistency, with seeds.

### COLOUR

Deep red

### ODOUR

Free of foreign odours

### PRESERVATIVES and/or PRESERVATIVES

8% to 10% Salt

### SCOVILLE GRADE

30,000 - 50,000

### PRESENTATION

- 200 kilos Barrels
- 1 Gallon resealable Mylar bags

### CLEANING AND CLASSIFICATION:

Classification starts at harvesting when fallen fruits are discarded to avoid contamination. Then, fruits are classified according to their color and texture, they are stripped of their leaves and stalks. Afterward, they are washed with turbulent water to loosen the soil, in this phase the poor quality fruits are found and discarded.

### GRINDING:

On the same day as the harvest, the grinding process is carried out, incorporating the salt. The grinding time is established according to the desired consistency.

### EXPIRATION DATE:

24 months after the grinding date.
